APRIL-2026

ABSTRACT

Luxe Glow is a full-stack web application developed using modern web technologies to provide users with an online platform for booking beauty and parlour services. The system allows users to browse nearby parlours, select services, book appointments, and complete payments through an intuitive interface.

The frontend is designed using HTML, CSS, and JavaScript, providing a responsive and visually appealing UI. The backend is implemented using Node.js and Express.js, with MongoDB used for storing user and booking data. Secure authentication is implemented using REST APIs.

The system includes features such as location-based filtering, service selection, appointment scheduling, and multiple payment options. The integration of DevOps practices such as version control and deployment ensures scalability and maintainability.

This project demonstrates the implementation of a real-world booking system using full-stack development and modern web practices.

CONTENTS

Chapter No. **Page No.**

1. INTRODUCTION

1.1 About the Project 01

1.2Objectives 01

2. LITERATURE REVIEW

2.1 Overview of DevOps and Full-Stack Development 02

2.2 Related Studies and Existing Tourism Applications 02

2.3 Tools and Technologies Used 02

3. METHODOLOGY

3.1 System Architecture 03

3.2 Data Handling and Authentication 03

3.3 Application Workflow 05

4.RESULTS AND DISCUSSION

4.1 Implementation Results (System Features) 06

4.2 Output Screens 06

4.3 Performance Analysis 11

4.4 Discussion 11

5.CONCLUSION

5.1 Conclusion 12

5.2 Future Scope 12

CHAPTER 1: INTRODUCTION

1.1 About the Project

Luxe Glow is a web-based parlour booking system that enables users to easily find beauty salons and book services online. The application replaces traditional manual booking systems with a digital solution.

Users can:

- Login/Register
- View parlours by location
- Select services
- Book appointments
- Choose payment methods

1.2 Objectives

- To build a user-friendly booking system
- To provide real-time service selection
- To enable online appointment scheduling
- To implement secure backend APIs
- To integrate full-stack technologies

📖 CHAPTER 2: LITERATURE REVIEW

2.1 Overview

Online booking systems are widely used in service industries. Luxe Glow follows this approach to improve user convenience.

2.2 Existing Systems

Platforms similar to this include:

- Urban Company
- BookMyShow

These platforms provide booking services but are more complex and large-scale.

2.3 Tools and Technologies Used

Frontend

- HTML
- CSS (custom styling, responsive design)
- JavaScript (DOM manipulation, API calls)

Backend

- Node.js , Express.js

Database

- MongoDB

APIs Used

- /api/auth/login → User authentication

- /api/booking/save → Save booking details

⚙ CHAPTER 3: METHODOLOGY

3.1 System Architecture

The system follows a **client-server architecture**:

- Frontend (UI in browser)
- Backend (Node.js server)
- Database (MongoDB)

3.2 Implementation Details (BASED ON THE CODE)

🔐 Login System

- User enters username & password
- Data sent to backend using fetch()
- API: /api/auth/login

🏠 Home Page

- Displays **parlours list**
- Location filter dropdown:
    - Gachibowli
    - Hitech City
    - Madhapur
    - Banjara Hills

💇‍♀️ Services Page

- Shows services like:
    - Hair Cut
    - Facial
    - Makeup
    - Nail Art

📅 Booking System

- User enters:
    - Name
    - Date
    - Time

💳 Payment System

- Multiple options:
    - UPI
    - Card
    - Cash

✅ Confirmation

- Displays: **“Booking Confirmed”**

3.3 Application Workflow

Stage	User Action	System Response	Output
1	Login/Register	API authentication	Home Page
2	Select Location	Filter parlours	Parlour List
3	Choose Service	Load services	Service Page
4	Enter Booking	Save details	Payment Page
5	Select Payment	Process	Confirmation
6	Final Output	Booking saved	Success Page

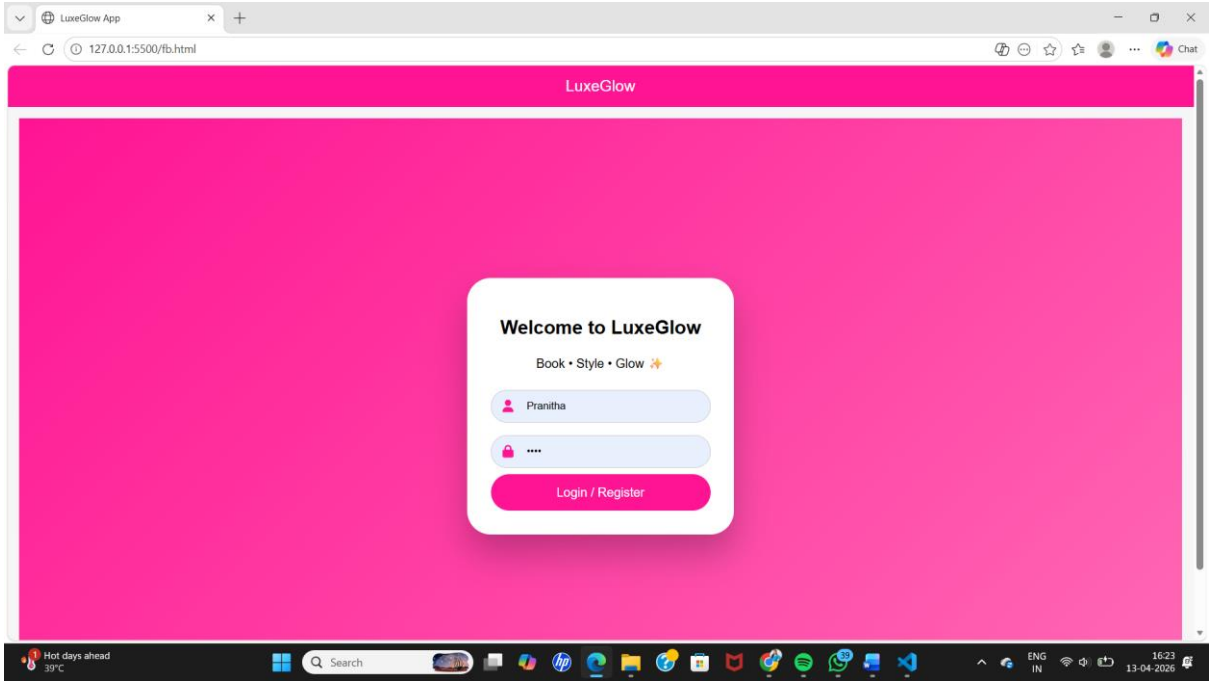
📊 CHAPTER 4: RESULTS AND DISCUSSION

4.1 System Features (FROM THE PROJECT)

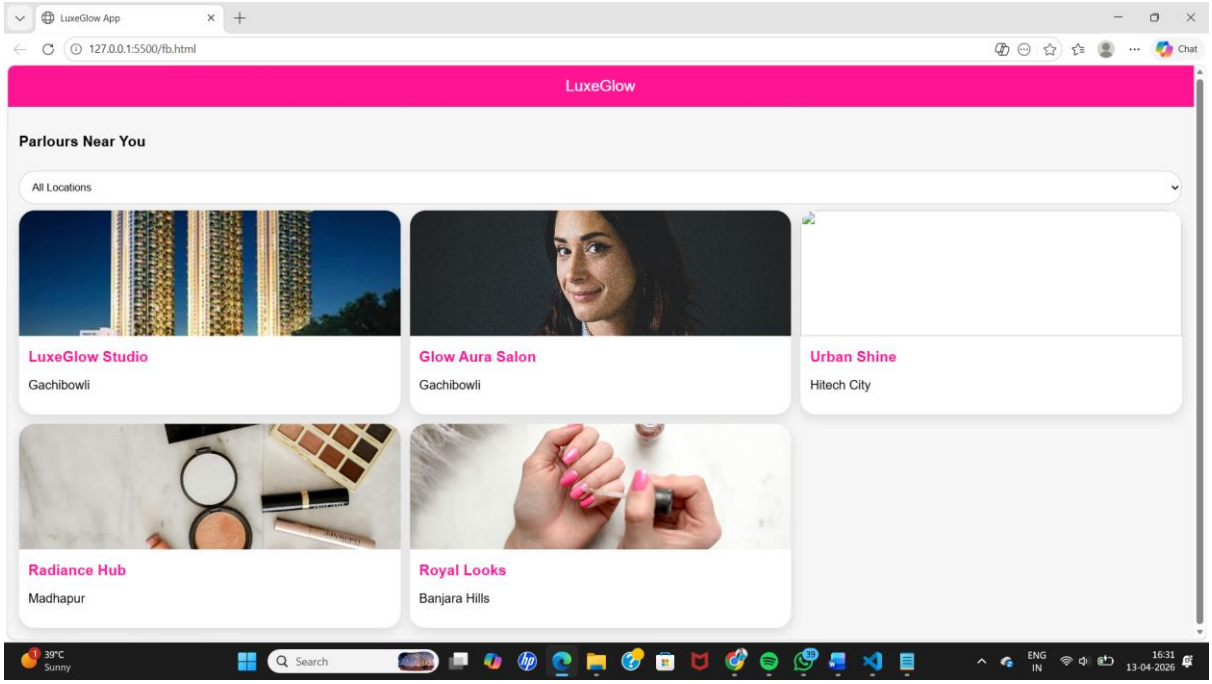
✓ User Login system
✓ Parlour listing with images
✓ Location-based filtering
✓ Service selection
✓ Booking system
✓ Payment options
✓ Confirmation page

4.2 Output Screens

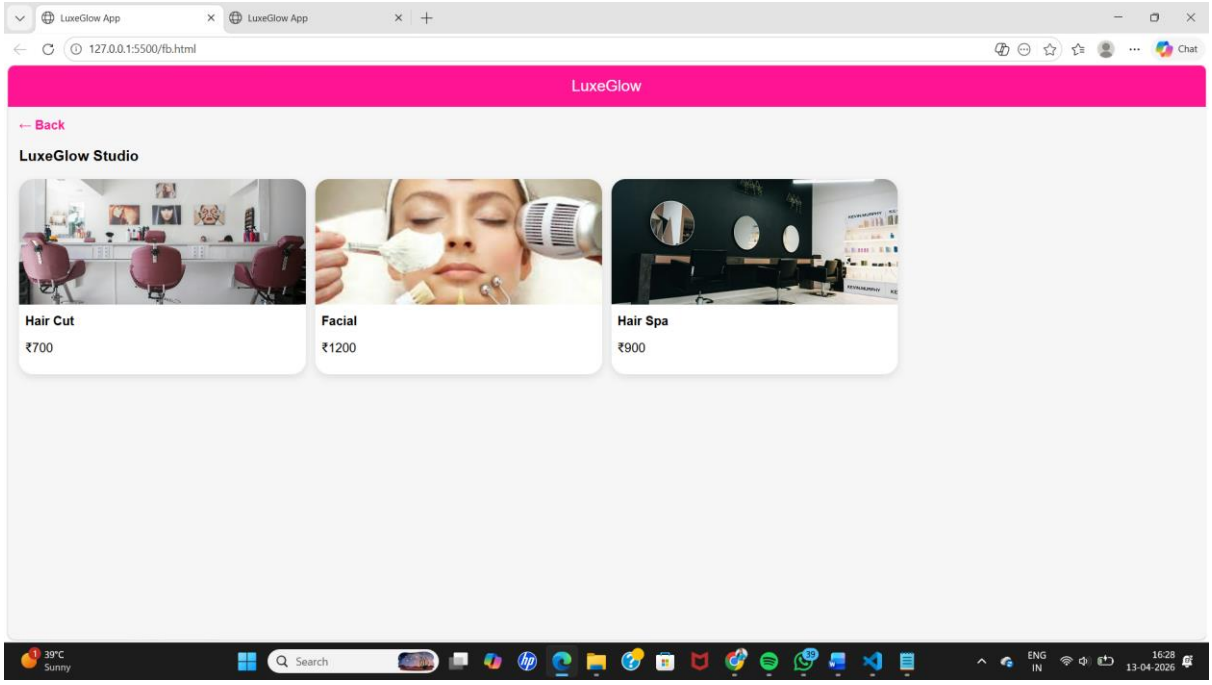
1. Login Page



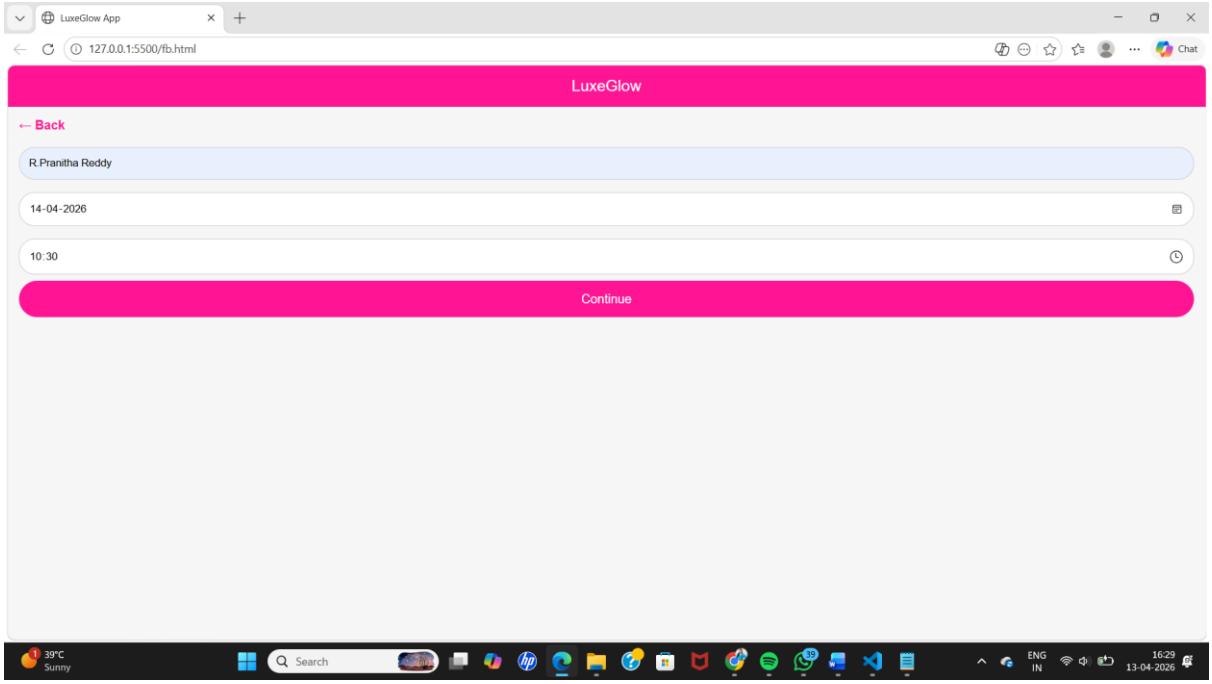
2. Home Page (Parlours)



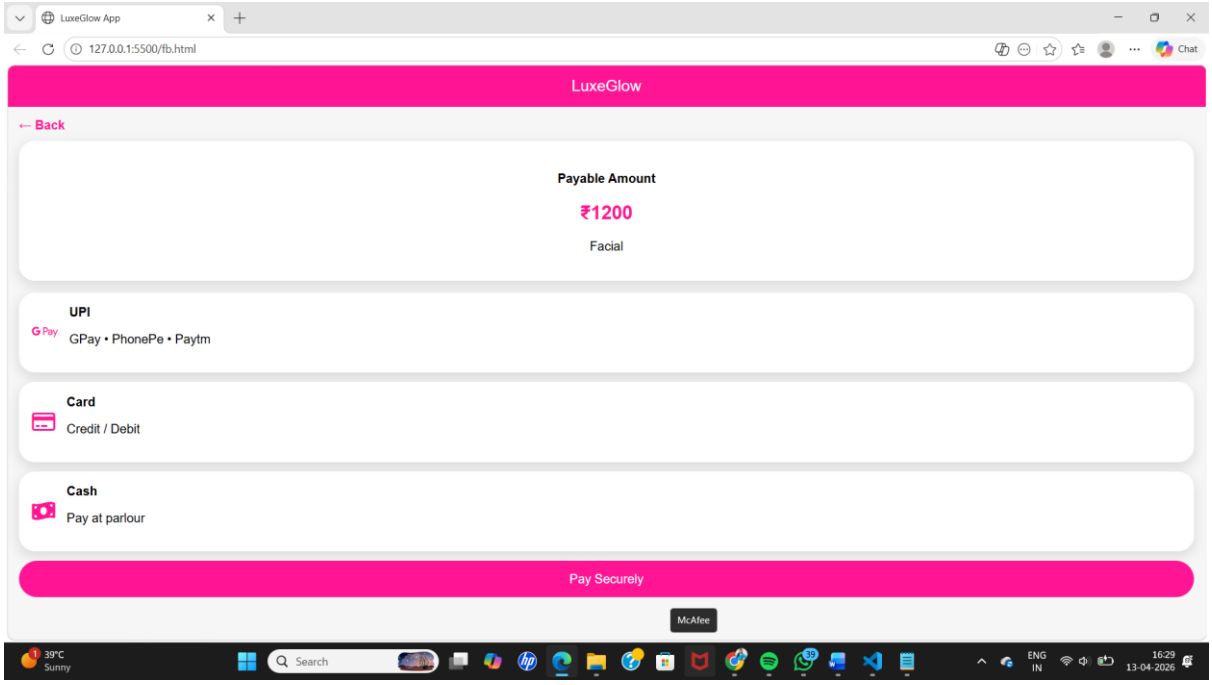
3. Services Page



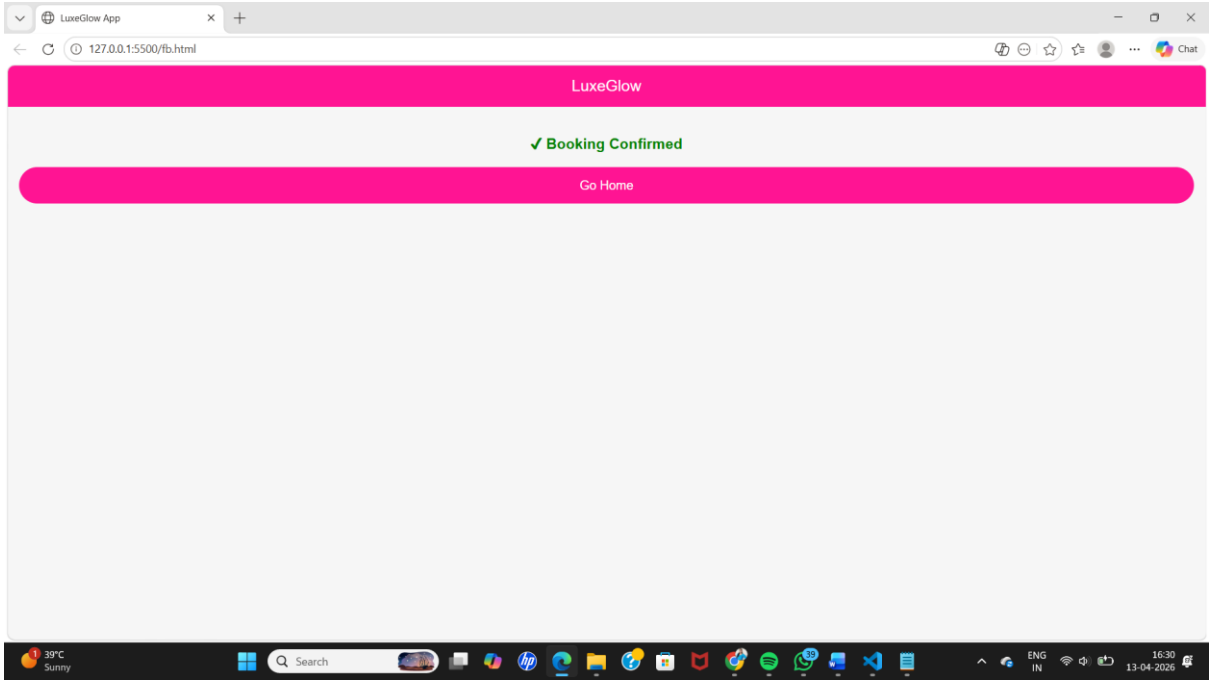
4. Booking Page



5. Payment Page



6.Success Page



7.Backed Connection

```
payment:selectedPayment
})
```

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS

```

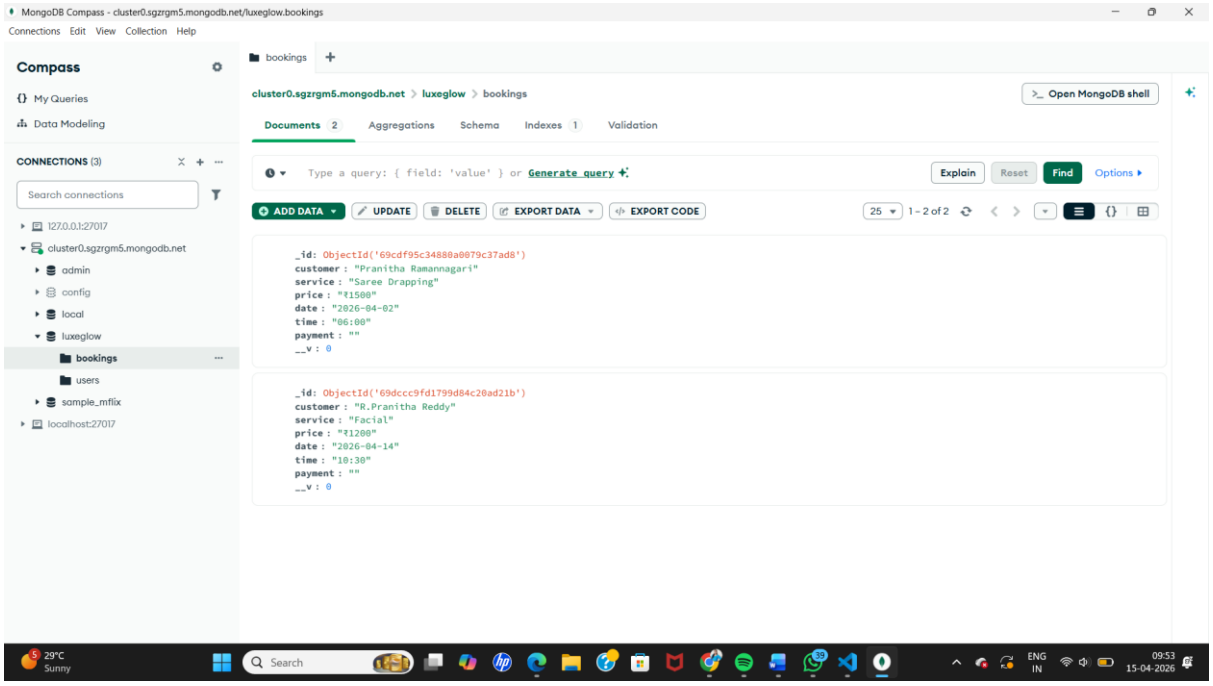
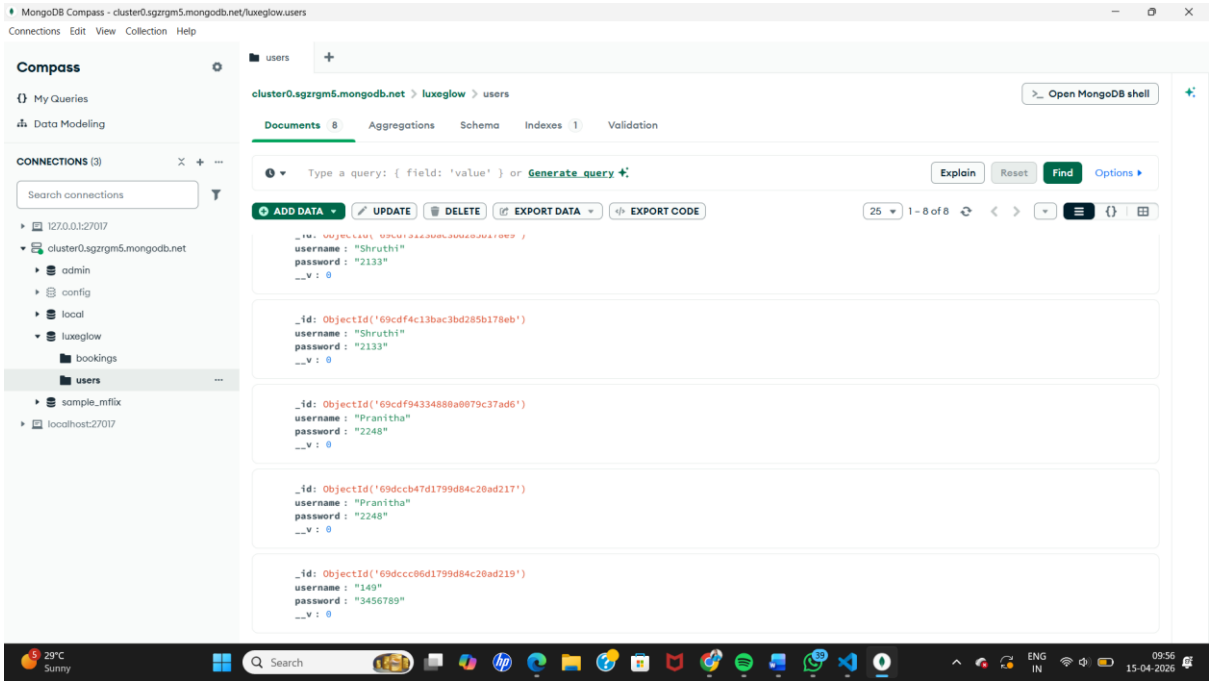
```

8.Users And Booking Data Saved





4.3 Performance Analysis

- Fast UI rendering
- Smooth navigation using JavaScript
- API-based communication
- Lightweight frontend

4.4 Discussion

The Luxe Glow system successfully demonstrates how a real-world booking application can be built using simple frontend technologies and backend APIs. It improves user experience by providing an interactive and efficient booking process.

🏁 CHAPTER 5: CONCLUSION AND FUTURE WORK

5.1 Conclusion

The Luxe Glow project successfully implements a complete parlour booking system using full-stack development. It provides a smooth user experience and demonstrates practical implementation of APIs and database integration.

5.2 Future Scope

- Online payment gateway integration (Razorpay/Stripe)
- Admin dashboard
- Real-time slot availability
- Mobile app version
- AI-based service recommendations
